INTRODUCTION

This Annual Planning Information Report for fiscal year 1985 is compiled for use primarily by socioeconomic planners. It contains a wide range of information on the population, employment, occupations, and socioeconomic characteristics of the people of Idaho. The planning report includes data for the state's six planning areas (see Figure A) as well as the statewide numbers. Data for Ada County (Boise City MSA), which is Idaho's only Metropolitan Statistical Area, are also included in many of the tables.

Description of Area

Idaho is located in the northwestern United States. It is bordered by Washington, Oregon, Nevada, Utah, Wyoming, Montana, and Canada. It is a sparsely populated state with varied terrain of sagebrush prairie and forested mountains. The Clearwater, Salmon, Lost River, and Bitterroot Mountains are among the mountain ranges within the state's borders. Major rivers in the state include the Salmon, Clearwater, and Snake Rivers. The rugged beauty of the land and the easy access to many outdoor activities such as boating, skiing, hunting, and fishing have helped to make tourism and recreation a large and growing industry in the state.

Idaho has traditionally been an agricultural state, but recent years have seen manufacturing, especially electronics, rapidly gaining in economic importance. Livestock, especially cattle, is important to the economy. Major crops grown by Idaho's farmers include peas, alfalfa seed, Marion Kentucky Bluegrass seed, and 'famous' potatoes. Major manufacturing industries include

food processing, forest products, phosphate processing into fertilizer, and electronics manufacturing. Mining has played an important role in the development of the state, with phosphate rock, silver, lead, and zinc among the resources being mined. A recent addition to the mining industry in the state is the Cyprus Thompson Creek mine in Custer County, where molybdenum is mined by means of an open-pit operation. Economic conditions of the last few years have caused a reduction in the importance of other types of mining to the state's economy.

Boise MSA

There is only one Metropolitan Statistical Area (MSA) in Idaho. An area qualifies as recognition as an MSA in one of two ways: if there is a city of at least 50,000 population, or an urbanized area of at least 50,000 with a total metropolitan population of at least 100,000. The Boise City MSA consists of all of Ada County and is located in the southwestern part of the state. It has the largest population of any county in Idaho. Boise is the capital city of the state and is a center of activity for business and government. Like the rest of the state, Ada County has a mild climate and experiences four definite seasons each year. Although Boise City itself is lush with trees and the Boise River, the surrounding area is naturally desert-like and farmers must rely heavily on irrigation to maintain their crops.

Highlights

For the past several years, Idaho's economy has been strongly influenced by the national economy. The national recession has been the major factor contributing to Idaho's loss of employment opportunities and higher unemployment rates. The national economy began to show signs of recovery in 1983 and so did Idaho's, though the length and depth of the recession have caused long-term changes to the state's economy and full recovery will come slowly.

The lumber and wood products industry began to rebound in 1983 following the extended layoffs, mill closures, and shortened work weeks experienced in 1982. The number of new residential units constructed nationally improved considerably during the year, thus increasing demand for Idaho's lumber. Employment in the food processing industry declined in 1983 and is at its lowest level since 1975. The decline is the result of lower demand for many types of processed foods. Times remain tough for Idaho's construction industry and the outlook is not rosy because mortgage interest rates remain high.

The labor force is expected to reach 448,800 statewide in 1985. This is 3.9 percent above the 432,033 total labor force in 1980, and constitutes an increase of 5.8 percent from 1983's preliminary annual average labor force of 424,169. The unemployment rate in 1985 is expected to be 5.7 percent, a substantial decrease from the 1983 preliminary annual average of 7.5 percent.

There was a 32.5 percent increase in population between 1970 and 1980. Idaho's population is projected to further increase by 7.7 percent over the 1980 census by 1985. The 1985 population is expected to reach 1,016,709. Although Idaho's population experienced rapid growth in the 1970's which slowed considerably in the early 1980's, the state should experience more rapid growth as the economy improves.

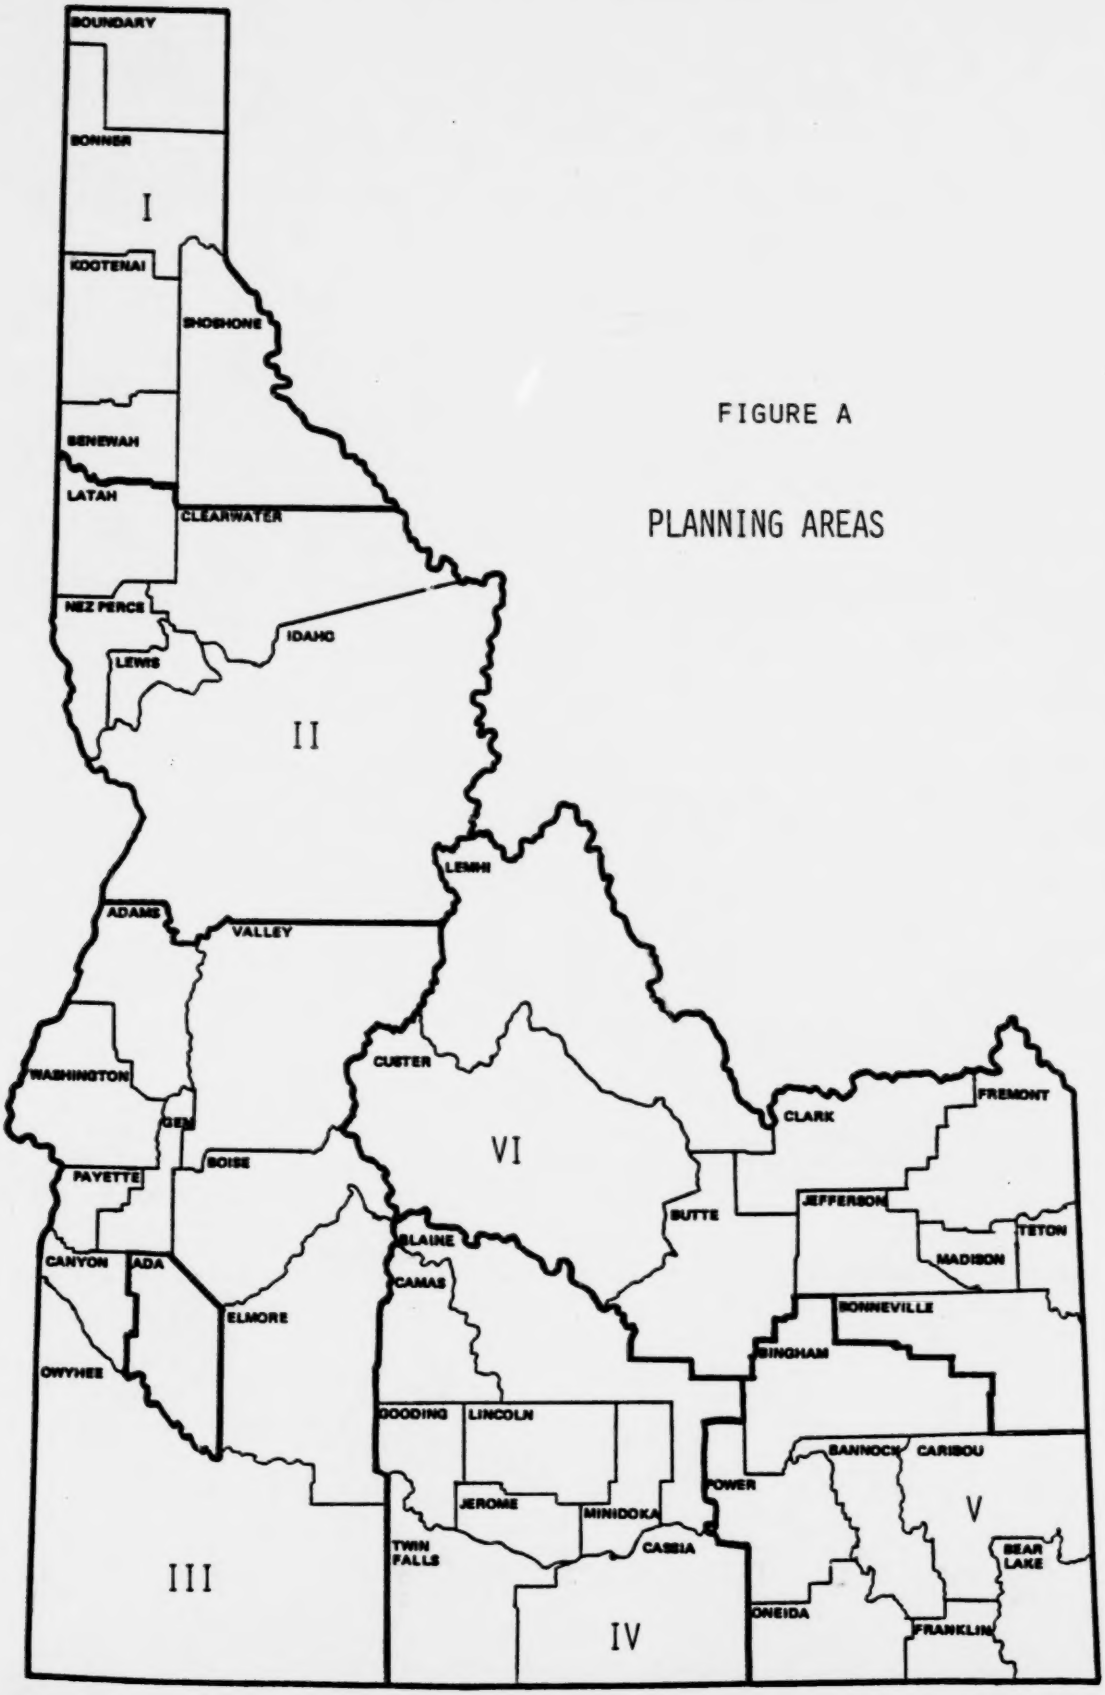

FIGURE A

PLANNING AREAS

Population

The population projections in this report were developed by the Research and Analysis Bureau. Data from the 1980 census, 1982 census projections, survival rates from the Bureau of Labor Statistics, and Idaho birth rates were used in making these projections.

Idaho's population continues to increase, although at a slower rate than during the 1970's The state's population is expected to be 1,016,709 in 1985, a 7.7 percent increase from the 1980 census total.

A major element affecting Idaho's growth, the birth rate, continues to run well above the national average of 16.0 for 1982. According to the Bureau of Vital Statistics, the 1982 provisional birth rate in Idaho was 20.4 per 1,000 population—27.5 percent higher than the national rate. The estimated fertility rate for Idaho was 91.2 live births per 1,000 women 15-44 years in age. This is a slight increase from 1981, when the fertility rate was 90.8 live births per 1,000 women.

The following tables present data on Idaho's projected 1985 population. TABLE 1 gives total, male, and female population for each county and area within the state. TABLE 2 lists detailed age breakouts for the state and all six planning areas. TABLE 3 presents data for the population 16 years old and older broken out by sex within each planning area and the state. TABLE 4 gives projected race totals for each county. When referring to this table and others which address race, one should keep in mind that the Census Bureau does not treat Hispanic as a racial category, but as an ethnic classification. That is, although a person may be listed in this category, he will also be found in a racial category such as white, black, or other.

*The Hispanic count is an ethnic rather than a race classification. It fits into the major race categories and should not be added to the racial groups to obtain data for all persons in a minority group.

Labor Force

To be considered in the labor force, a person must be at least 16 years of age and either employed or unemployed and looking for work. The term 'Civilian Labor Force' excludes members of the armed forces. The Department of Employment deals primarily with the Civilian Labor Force. The projected county labor force data was estimated using the 1983 annual average labor force data for each county. A ratio between the county annual average labor force and the statewide labor force for 1983 was developed and applied to the projected 1985 statewide labor force. The sex, age, and racial breakouts of labor force were derived by applying the 1980 Census ratios to the 1985 projected labor force data. The area data are sums of the data for counties which make up the areas.

The statewide labor force is projected to be 448,800 in 1985. This is 3.9 percent above the 1980 labor force of 432,033. TABLE 5 lists data for the 1985 projected labor force by sex for counties, areas, and the state. TABLE 6 gives area, state, and Ada County totals for labor force by age for 1985. TABLE 7 presents the projected 1985 labor force by race for the same areas. Because of census suppression of county data for some races, the data in this table are presented in only white and nonwhite race classifications. TABLE 8 presents statewide data for labor force by race and sex. Projected 1985 labor force by race within county is shown in TABLE 9. Once again, in these last two tables, the Hispanic classification is not considered by the Census Bureau to be a race classification, so it will not add into the totals shown.

Unemployment and Unemployment Rates

The projections for county unemployment were made using the 1983 annual average unemployment data for each county. A ratio between the county annual average unemployment and the statewide unemployment for 1983 was developed and applied to the projected 1985 statewide unemployment total. The sex, age, and racial breakouts of unemployment were derived by applying 1980 census ratios to the 1985 projected number of unemployed. The area data are sums of the data for the counties which make up the area.

The total number of unemployed in Idaho for 1980 was 28,283. The number projected for 1985 is 25,400, a 10.2 percent decrease. The unemployment rate is expressed as a ratio of the number of persons unemployed to the number of persons in the labor force as a whole. The projected 1985 unemployment rate for Idaho is 5.7 percent of the labor force.

TABLE 10 lists unemployment by sex for 1985 for each county, area, and the state. Projected unemployment by age group is presented in TABLE 11. TABLE 12 shows projected unemployment by race within area; the race breakouts are white and nonwhite because of census data suppression. TABLE 13 shows statewide numbers of unemployed by race and sex. Projected 1985 unemployment by race within county is presented in TABLE 14.

TABLES 15 and 16 present projected 1985 unemployment rates by age and sex within area. Statewide and Ada County rates are also given in each of these tables. The final table in this section (TABLE 17) gives Idaho statewide unemployment rates by month for the years 1976 through 1983. The rates presented in this table can give one an historical perspective with which to compare the projected rates for 1985.

*Annual Averages are computed using unadjusted monthly data.

Characteristics of UI Claimants

Tables in this section present data on the characteristics of those persons who filed for Unemployment Insurance benefits with the Department of Employment during 1983. The data presented is based on a 20 percent sample of claimants who were surveyed after filing their claims.

TABLE 18 presents area totals of UI claimants by race, as well as the total number of claimants in each area. TABLE 19 shows the highest level of schooling attained by the claimants. Nonresponse to this question was relatively high, hence the large number of claimants in the INA category. TABLE 20 presents area specific data on UI claimants by sex and by duration of their unemployment. Many of the 0 weeks claimed shown in this table and in TABLE 23 represent people who were found to be ineligible for Unemployment Insurance benefit payments. Many of these claimants were people who filed for extended benefits but who were required to file for regular benefits to determine their eligibility before filing for extended benefits.

TABLE 21 lists claimants by the industry of the claimant's principal employer prior to filing for UI benefits. UI claimants broken out by age and sex within areas are listed in TABLE 22. TABLE 23 presents area data on the percentage of claimants by duration within industry of the claimant's principal employer. From this table, one can get an idea of which industries tended to produce long or short term unemployment. Once again, the category of 0 weeks claimed contains many people who were found to be ineligible for UI benefits, as well as some who were required to file for regular benefits before filing for extended benefits.

TABLE 24 shows area specific data on claimant's occupations and industry of their principal employers. The data is expressed as a percentage of the occupational categories.

The final table in this section is not derived from the same data base as the others. TABLE 25 lists statewide annual averages of unemployed persons by reason for unemployment for the years 1977 through 1982. This data is compiled by the Bureau of Labor Statistics and is published in Geographic Profile of Employment and Unemployment.

Occupational Information

TABLE 26 presents calendar year 1982 annual average employment by industry and county for employment covered by the Idaho Employment Security Law. This data is also compiled and published quarterly; similar data is published annually by the Department of Employment in its booklet Basic Economic Data for Idaho.

TABLE 27 lists 1980 census information on class of worker by county. This is followed by three tables of 1980 census occupational information. TABLE 28 gives a breakout of major occupations by area. TABLE 29 presents the same type of information by county. These two tables include only those persons who were employed at the time the census was taken. TABLE 30 lists occupational data for the state broken out by race and sex. The totals on this table are higher than those for the two previous tables because they include data for those persons who were unemployed at the time the census was taken, but who listed their most recent occupation if they had worked in the previous five years.

*Because Hispanic is not a racial category, it will not add into the total.

Socioeconomic Characteristics

The 1980 census is the most current source for much of this type of information. Included in this section is information on income, poverty, wages, and welfare recipients.

Mean and median income for households, families, and unrelated individuals by county is presented in TABLE 31. This is 1979 income data, which was collected with the 1980 census. TABLE 32 gives Idaho personal income by major sources for the years 1980 through 1982. Per capita personal income by county is presented in TABLE 33 for the years 1976 through 1981.

Annual wages in Idaho (TABLE 34) lists calendar year total wages paid by industry by county in 1982. This information is also compiled and published on a quarterly basis by the Department of Employment. TABLE 35 gives the average hourly salaries for selected occupations in Idaho. This information is taken from the Idaho Occupational Wage Survey, which presents the results of an annual wage survey conducted by the Department of Employment.

TABLE 36 gives data on the 1985 projected number of economically disadvantaged persons by county by age group. This table is based on information provided by the U.S. Department of Labor from the 1980 census. The information presented in TABLES 37 and 38 are the most current standards for poverty level and the 70% of lower living standard income level. TABLE 39 lists 1980 census data for persons below poverty by race and county. Because of Idaho's small population, much of the racial data has been suppressed.

TABLES 40 and 41 present fiscal year 1983 annual average data on public assistance recipients and food stamp activity by area. Data for these tables, as well as TABLE 42, were provided by the Department of Health and Welfare. TABLE 42 gives statewide data on the age and sex of persons receiving public assistance by program. The data presented in this table are tabulated as

of February 1984. The final table in this section (TABLE 43) shows civilian veterans in the state by period of service by county and is 1980 census information.

TABLE 31

INCOME IN 1979 - IDAHO 1980 CENSUS

Economically disadvantaged is the higher of the total number of persons with a total family income at or below the OMB poverty level or 70% of the lower living standard income level.

TABLE 37

POVERTY INCOME LEVEL

Size of Family Unit	12-Month Maximum
1	$ 4,860
2	6,540
3	8,220
4	9,900
5	11,580
6	13,260
7	14,940
8	16,620

For family units with more than eight members, add $1,680 for each additional member.

TABLE 38

70% OF LOWER LIVING STANDARD INCOME LEVEL (6-11-82)

Size of Family Unit	Balance of State 12-Month Maximum	Ada County 12-Month Maximum
1	$(4,140)*	$(4,099)*
2	6,780	6,712
3	9,300	9,207
4	11,490	11,380
5	13,550	13,414
6	15,850	16,692

For family units larger than six persons, add $2,300 for each additional person of a Balance of State family and $2,280 for each additional person of an Ada County family.

* Where the appropriate poverty level for a particular family size is greater than the corresponding LLSIL, the LLSIL is indicated in parentheses.

Employment Service Automated Reporting System (ESARS)

The last section is a copy of the latest (Fiscal Year 1983) Department of Employment ESARS Statewide report. This report is a matrix of information concerning job applicants on file at local Job Service offices. Because the selection process is based simply on those members of the labor force who choose to list themselves at a Job Service office, the system is obviously not designed to be a representative sample of the Idaho labor force. If this limitation is kept in mind, however, the level of detail can be useful when trying to form an image of the Idaho labor pool. One must understand that the data on the matrix (TABLES 45A to 45D) are not accumulated totals, but a record of those applicants on the file as of September 30, 1983.

TABLE 44 below gives some accumulated totals for fiscal year 1983 taken from ESARS Table 91.

TABLE 44

ESARS

Applicants Active At Any Time FY 1983 - Statewide

(October 1, 1982 – September 30, 1983)

Total Applicants	128,738
Handicapped	3,771
Veterans	20,313
Total UI Claimants	54,262
Minority	9,793
Female	55,944

Source: ESARS Table 91, "Year-to-Date Summary of Service to Individuals"

Note: Data for economically disadvantaged applicants is no longer compiled on the ESARS system.
